

## IEC 31010:2019 Risk management

**Develop the necessary skills to perform risk assessment using the OCTAVE Allegro Method**

### **Why should you attend?**

IEC 31010:2019 is published as a double logo standard with ISO and provides guidance on the selection and application of techniques for assessing risk in a wide range of situations. The techniques are used to assist in making decisions where there is uncertainty, to provide information about particular risks and as part of a process for managing risk. The document provides summaries of a range of techniques, with references to other documents where the techniques are described in more detail. This second edition cancels and replaces the first edition published in 2009. This edition constitutes a technical revision. This edition includes the following significant technical changes with respect to the previous edition: more detail is given on the process of planning, implementing, verifying and validating the use of the techniques; the number and range of application of the techniques has been increased; the concepts covered in ISO 31000 are no longer repeated in this standard. Keywords: uncertainty, risk management

After mastering all the concepts of risk assessment, you can demonstrate that you have the practical knowledge and professional capabilities to support an organization in performing a risk assessment using the IEC 31010:2019

## Who should attend?

- Individuals participating in risk assessment activities
- Managers seeking to acquire the necessary skills to perform qualitative risk evaluation
- Managers seeking to develop the necessary skills for identification of assets, vulnerabilities and threats to those assets
- Individuals seeking to support organizations to determine and evaluate potential consequences of threats

## Course agenda
